RESEARCH INTERESTS

My research is primarily focused on the intersection of machine learning, computer vision, and medical imaging, with the goal of enabling opportunistic screening for early-stage, low-cost disease detection in everyday clinical practice. I am currently interested in (1) **Multi-modal foundation models** that integrate imaging, clinical, and multi-omics data for clinical decision-making; (2) **Federated learning** methods to leverage distributed, heterogeneous data while preserving privacy; and (3) **Trustworthy and explainable AI** systems that adapt to distribution shifts over time, align with nuanced human feedback, and mitigate algorithmic bias.

JOURNAL PUBLICATIONS AND CONFERENCE PROCEEDINGS

I have (first/co-) authored 7-(1/6) journal publications, 10-(6/4) conference papers, and 19-(4/15) conference abstracts. My work has been featured in top conferences (e.g., CVPR, MIDL, and ML4H) and journals (e.g., Radiology).
